Evaluation

Submissions are evaluated one the Root Mean Squared Logarithmic Error (RMSLE). The RMSLE is calculated as

$$\sqrt{\frac{1}{n}\sum_{i=1}^{n}(\log(p_i+1)-\log(a_i+1))^2}$$

Where:

- n is the number of rows in the test set
- p_i is your predicted units sold
- a_i is the actual units sold
- $\log(x)$ is the natural logarithm

Submission Format

Your submission file must have a header and should be structured in the following format. The id column is a triplet representing a store_nbr, item_nbr, and date. Form the id by concatenating these (in that order) with an underscore. E.g. "2_1_2013-04-01" represents store 2, item 1, sold on 2013-04-01.

```
id,units
2_1_2013-04-01,0
2_2_2013-04-01,0
2_3_2013-04-01,0
...
```
